

CHEMICAL PEEL: *Surface, Renew, and Refresh Your Complexion*

What is a Chemical Peel?

A chemical peel is a powerful, non-invasive cosmetic treatment used to improve the texture, tone, and appearance of your skin. By applying a specialized solution, we gently exfoliate the outermost, damaged layers of skin, encouraging the growth of a fresh, smoother, and more youthful complexion underneath.

Why Choose a Peel?

Chemical peels are one of the most effective ways to address persistent skin concerns:

- **Smooths Fine Lines:** Softens the appearance of wrinkles and expression lines.
- **Fades Pigmentation:** Diminishes dark spots, sun damage, and melasma.
- **Clears Acne:** Deep cleanses pores and reduces the severity of breakouts.
- **Improves Texture:** Removes dull, rough surface cells for a soft, refined feel.
- **Boosts Glow:** Instantly improves radiance by revealing healthy, vibrant skin.

The Treatment Experience

1. **Skin Analysis:** We determine the right depth and formula for your specific skin type and goals.
2. **Application:** The peel solution is carefully applied, creating a controlled, therapeutic exfoliation.
3. **Neutralization:** The peel is removed, and a soothing, hydrating serum is applied to calm the skin.
4. **Recovery:** Depending on the peel strength, you may experience light peeling or sensitivity for a few days as your skin rejuvenates.

Quick Facts

- **Downtime:** Ranges from "lunchtime" peels with zero downtime to moderate peels requiring 3–5 days of healing.
- **Best For:** Face, neck, and hands.
- **Frequency:** Can be done as a one-time pick-me-up or a series of treatments for dramatic corrective results.
